EXAMINER'S AMENDMENT

The following changes to the drawings have been approved by the examiner and agreed upon by applicant: in claim 1, lines 18-21, "the distance between the chopping axis and the table plane being at least about 0.79 times the radius of the blade, and a distance between the arbor and the table plane when the saw assembly is in a lowered position is between about 0.671 and about 0.6775 times the radius of the blade" must be shown. Figure 7 currently shows element ABP being greater than element AABP.

Authorization for this examiner's amendment was given in a telephone interview with applicant's representative, Mr. Adan Ayala, on March 30, 2007.

INFORMATION ON HOW TO EFFECT DRAWING CHANGES

Replacement Drawing Sheets

Drawing changes must be made by presenting replacement sheets which incorporate the desired changes and which comply with 37 CFR 1.84. An explanation of the changes made must be presented either in the drawing amendments section, or remarks, section of the amendment paper. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). A replacement sheet must include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of the amended drawing(s) must not be labeled as "amended." If the changes to the drawing figure(s) are not accepted by the examiner, applicant will be notified of any required corrective action in the next Office action. No further drawing submission will be required, unless applicant is notified.

Identifying indicia, if provided, should include the title of the invention, inventor's name, and application number, or docket number (if any) if an application number has not been assigned to the application. If this information is provided, it must be placed on the front of each sheet and within the top margin.

Annotated Drawing Sheets

A marked-up copy of any amended drawing figure, including annotations indicating the changes made, may be submitted or required by the examiner. The annotated drawing sheet(s) must be clearly labeled as "Annotated Sheet" and must be presented in the amendment or remarks section that explains the change(s) to the drawings.

Timing of Corrections

Applicant is required to submit acceptable corrected drawings within the time period set in the Office action. See 37 CFR 1.85(a). Failure to take corrective action within the set period will result in ABANDONMENT of the application.

If corrected drawings are required in a Notice of Allowability (PTOL-37), the new drawings MUST be filed within the THREE MONTH shortened statutory period set for reply in the "Notice of Allowability." Extensions of time may NOT be obtained under the provisions of 37 CFR 1.136 for filing the corrected drawings after the mailing of a Notice of Allowability.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the claims define a miter saw with a motor that drives a saw blade via a first gear disposed on a portion of the arbor attached to the saw blade, wherein the first gear meshes with an intermediate gear, which in turn meshes with a second gear that is driven by a belt connected to the motor. The second gear is above a line drawn between the motor shaft and the arbor.

Ushiwata (5,425,294) teaches a first gear disposed on a portion of an arbor that drives a saw blade, wherein the first gear meshes with an intermediate gear, which in turn meshes with a second gear that is driven by a motor. Ushiwata does not teach a belt connected between the second gear and the motor axis, and does not teach that the second gear is above a line drawn between the motor axis and the arbor.

Tsune (5,974,927) teaches a backlash eliminator for eliminating backlash between the gears used to drive saw blade via a belt connected to a motor axis. Tsune does not teach a second gear is above a line drawn between the motor axis and the arbor.

Art Unit: 3724

Bergler (4,531,441) teaches a miter saw that has a motor that is mounted at an angle to the arbor attached to the saw blade, wherein the saw blade is driven via a belt connected to the motor axis. Bergler does not teach a first gear, an intermediate gear or a second gear.

It would not have been obvious to combine the references with other prior art teachings in order to meet the claims limitations

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
